This European Technical Assessment
contains

31 pages including 3 annexes which form an integral part
of this assessment

This European Technical Assessment is
issued in accordance with Regulation (EU)
No 305/2011, on the basis of

EAD 330008-02-0601

This version replaces

ETA-17/0549 issued on 26 June 2018

The European Technical Assessment is issued by the Technical Assessment Body in its official language. Translations of this European Technical Assessment in other languages shall fully correspond to the original issued document and shall be identified as such.

Communication of this European Technical Assessment, including transmission by electronic means, shall be in full. However, partial reproduction may only be made with the written consent of the issuing Technical Assessment Body. Any partial reproduction shall be identified as such.

This European Technical Assessment may be withdrawn by the issuing Technical Assessment Body, in particular pursuant to information by the Commission in accordance with Article 25(3) of Regulation (EU) No 305/2011.

Specific part

1 Technical description of the product

The HAZ METAL - Anchor Channel HMPR is a system consisting of C-shaped channel profile of carbon steel or stainless steel and at least two metal anchors non-detachably fixed to the channel back and channel bolts.

The anchor channel is embedded surface-flush in the concrete. HAZ METAL channel bolts with appropriate hexagon nuts and washers are fixed to the channel.

The product description is given in Annex A.

2 Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor channel is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor channel of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistances under static and quasi-static loads and displacements	See Annex C1 to C8
Characteristic resistance under fatigue cyclic loads	See Annex C10 to C12

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C9

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

In accordance with EAD No. 330008-02-0601, the applicable European legal act is: [2000/273/EC].

The system to be applied is: 1

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable EAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

Issued in Berlin on 20 March 2019 by Deutsches Institut für Bautechnik

HAZ METAL – Anchor Channel HMPR

Product Description
Installed condition

Annex A1

Marking of the HAZ - Anchor channel:
e.g. HAZ 54/33 - A4

HAZ = Identifying mark of the manufacturer
54/33 = Size
A4 = Material

Marked on the back of channel

or

Marked inside of channel

Material channels :

- No marking for 1.0038 / 1.0044
- A4 = 1.4401 / 1.4404 / 1.4571
- A2 = 1.4301
- L4 = 1.4362
- HC = 1.4529 / 1.4547
- F4 = 1.4462

Marking of the HAZ METAL - Channel bolt
e.g. HS A4-70

HS/HAZ = Identifying mark of the manufacturer
A4 - 70 = Material / Strength grade

Material / Strength grade channel bolts:
8.8 = Strength grade 8.8

A4-70 = Stainless steel (1.4401 / 1.4404 / 1.4571)
Grade - 70

L4-70 = Stainless steel (1.4362) Grade - 70

HC-70 = Stainless steel (1.4529 / 1.4547) Grade - 70

F4-70 = Stainless steel (1.4462) Grade - 70

HAZ METAL – Anchor Channel HMPR

Product Description

HAZ METAL – Channel bolts dimensions and strength grade

Annex A6

Specifications of intended use

Anchor channel and channel bolts subject to:

- Static and quasi-static loads in tension and shear perpendicular to the longitudinal of axis of the channel
- Fatigue cyclic loads
- Fire exposure for concrete class C20/25 to C50/C60

Base materials:

- Reinforced or unreinforced normal weight concrete according to EN 206-1:2000
- Strength classes C20/25 to C90/105 according to EN 206-1:2000
- Cracked or uncracked concrete

Use conditions (Environmental conditions):

- Structures subject to environmental conditions acc. Annex A3

Design:

- Anchor channel are designed under the responsibility of an engineer experienced in anchorages and concrete work.
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor channel and channel bolts are indicated on the design drawings (e.g. position of the anchor channel relative to the reinforcement or to the supports)
- For static and quasi-static loading as well as fire exposure the anchor channels are designed in accordance with EOTA TR 047 "Calculation Method for the performance of Anchor Channels", March 2018 or EN 1992-4:2018.
- For fatigue loading the anchor channels are designed in accordance with EOTA TR 050 "Calculation Method for the Performance of Anchor channels under Fatigue Loading", November 2015.
- The characteristic resistances are calculated with the minimum effective embedment depth.

HAZ METAL – Anchor Channel HMPR	Annex B1
Product Description Specifications	

Installation:

- The installation of anchor channels is carried out by appropriately qualified personnel under the supervision of the person responsible for the technical matters on site.
- Use of the anchor channels only as supplied by the manufacturer -without any manipulations, repositioning or exchanging of the channel components.
- Cutting of anchor channels is allowed only if pieces according Annex A5, Table 4 are generated including end spacing and minimum channel length and only to be used in dry internal conditions.
- Installation in accordance with the manufacturer's specifications given in Annexes B7 to B9.
- The anchor channels are fixed on the formwork or reinforcement such that no movement of the channels will occur during the time of laying the reinforcement and of placing and compacting the concrete.
- The concrete under the head of the anchors are properly compacted. The channels are protected from penetration of concrete into the internal space of the channels.
- Washer may be chosen according to Annex A3 and provided separately by the user.
- Orientating the channel bolts (groove according to Annex B7 and B8) rectangular to the channel axis.
- The setting torques given in Annex B4 and B5 shall be applied and shall not be exceeded.

HAZ METAL – Anchor Channel HMPR	Annex B5
Intended Use Installation parameters of HAZ METAL – Channel bolts Type HAZ	

General:

The fixture is in contact with the channel profile and the concrete surface.

The installation torques acc. Annex B4, Table 8.1 or and / or Annex B5, Table 8.2 shall be applied and shall not be exceeded.

Fig.1

Steel – Steel Contact:

The fixture is fastened to the anchor channel by suitable steel part (e.g. washer). Fixture is in contact with the channel profile only.

The installation torques Annex B4, Table 8.1 or and / or Annex B5, Table 8.2 shall be applied and shall not be exceeded.

Fig.2

HAZ METAL – Anchor Channel HMPR	Annex B6
Intended Use Positions of the fixture	

1. Fixing anchor channel

Install the channel surface flush and fix the channel undisplaceable to the formwork or to the reinforcement

a) Fixing to steel formwork

With HAZ METAL channel bolts and nuts, with rivets cramps or with magneting fixings.
or

b) Fixing to timber formwork

With nails through the pre-punched holes in the back of the channels and with staples.
or

c) Fixing to anchor channels at the top

- To timber batten on the side formwork (e.g. with HAZ METAL channel bolts)
- Fixing from above directly to the reinforcement or to a mounting rebar, attach the channel by wire binding.

2. Pouring concrete and regular compacting of concrete

Compact the concrete properly around the channel and the anchors.

a) Sidefaces to the formwork

b) in soffits

c) into top surfaces of concrete up stands

3. Removing of the channel infill

Clean the channel on the outside after removing the formwork

a) Foam infill

With a hammer or a hook
or

b) PE – foam infill

By hand or with help of a screw driver in one piece

HAZ METAL – Anchor Channel HMPR

Intended Use

Installation instructions for HAZ METAL anchor channels

Annex B7

4. Fastening the HAZ METAL channel bolt to the anchor channel

Fig. 1

a) Setting torques (General)

1. Insert the HAZ METAL channel bolt into the channel slot at any point along the channel length (Fig.1)
2. Turn the channel bolt 90° clockwise and the head of the screw locks into position (Fig.1)
3. Do not mount the channel bolt close than 25mm resp. 35mm (HMPR 54/33) from the end of the channel.
4. Use the washer under nut (Fig.1)
5. Check the correct fit of the screw. The groove on the shank end of the channel bolt must be perpendicular to the longitudinal axis.
6. Tighten the nuts to the installation torque according to Table 9.1 & 9.2 (Fig.2). The installation torque must not be exceeded.

		28/15	38/17	40/25 40/22 40/22P	49/30 50/30P	54/33 52/34P	72/49	28/15	38/17	40/25	49/30	54/33	72/49
Product factor	k ₁₃	2.0	2.0	2.0	2.0	2.0	2.0	2.0	2.0	2.0	2.0	2.0	2.0
		1.0 ¹⁾	1.0 ¹⁾	1.0 ¹⁾									
	k ₁₄	2.0	2.0	2.0	2.0	2.0	2.0	2.0	2.0	2.0	2.0	2.0	2.0
		1.0 ²⁾	1.0 ²⁾										

¹⁾ k₁₃ can be taken as 2,0 if V_{Rd,s,l} limited to N_{Rd,s,l}

²⁾ k₁₄ can be taken as 2,0 if max (V_{Rd,s,a}; V_{Rd,s,c}) are limited to min (N_{Rd,s,a}; N_{Rd,s,c})

HAZ METAL – Anchor Channel HMPR

Performances
Characteristic resistances under combined tension and shear load
Steel failure channel bolts

HAZ METAL – Anchor Channel HMPR

Performances
Characteristic resistances under tension and shear load under fire exposure

Annex C9

Table 21: Anchor channel / special screw combinations for fatigue cyclic loading

Anchor channels				Channel bolts			
Profile	d1 [mm]	d _h [mm]	Material	Special screw	Diameter Ø [mm]	Strength class	Material
40/22P	10	20	Hot dip galvanized	Type HS	M12	8.8	electro-plated
50/30P	12	24	Hot dip galvanized	Type HS	M16	8.8	electro-plated
52/34P	14	28	Hot dip galvanized	Type HS	M16	8.8	electro-plated

Design Method I

Table 22: Characteristic fatigue resistance for any steel failure after n load cycles without static preload (N_{Ed} = 0) – Design method I

Anchor channel	Load cycles n	40/22P	50/30P	52/34P
		$\Delta N_{Rk,s;0;n}$		
Characteristic resistances under fatigue tension after n load cycles without static load component	$\leq 10^4$	13.3	18.1	26.6
	$\leq 10^5$	6.6	9.4	15.6
	$\leq 10^6$	3.1	5.3	9.1
	$\leq 2 \times 10^6$	2.7	4.8	8.2
	$\leq 5 \times 10^6$	2.4	4.5	7.5
	$\leq 10^8$	2.3	4.2	7.0
	$> 10^8$	2.3	4.2	7.0

HAZ METAL – Anchor Channel HMPR-P

Performances

Characteristic resistances under fatigue cyclic tension loading (Steel failure) – Design Method I

Annex C10

Pull-out and concrete failure:

Table 22: Reduction factor of characteristic fatigue resistance for concrete related failure after n load cycles without static preload ($N_{Ed}=0$) – Design method I

Anchor channel		40/22P	50/30P	50/30P
Reduction factor for concrete cone / pullout fatigue resistance after n load cycles without static preload ($N_{Ed}=0$) $\Delta N_{Rk,c;0;n} = \eta_{k,c,fat} \cdot N_{Rk,c}$ $\Delta N_{Rk,p;0;n} = \eta_{k,p,fat} \cdot N_{Rk,p}$	Load Cycles n	$\eta_{k,c,fat} = \eta_{k,p,fat}$ [-]		
	$\leq 10^4$	0.736		
	$\leq 10^5$	0.665		
	$\leq 10^6$	0.600		
	$\leq 2 \times 10^6$	0.582		
	$\leq 5 \times 10^6$	0.559		
	$\leq 6 \times 10^7$	0.500		

HAZ METAL – Anchor Channel HMPR

Performances

Characteristic resistances under fatigue cyclic tension loading (concrete failure) - Design Method I

Annex C11

Design Method II

Table 23: Characteristic fatigue limit resistance for any steel failure without static preload ($N_{Ed}=0$) – Design method II

Anchor channel	40/22P	50/30P	52/34P
	$\Delta N_{Rk,s;0;n;\infty}$ [kN]		
Characteristic fatigue limit resistance ($n \rightarrow \infty$) for any steel failure without static preload ($N_{Ed}=0$)	2.3	4.2	7.0

Table 24: Characteristic resistance under fatigue tension load – Concrete failure

Anchor channel	40/22P	50/30P	52/34P
Characteristic resistances under fatigue tension load	$\eta_{k,c,fat} = \eta_{k,p,fat}$ [-]		
$\Delta N_{Rk,c;0;n;\infty} = \eta_{k,c,fat} \cdot N_{Rk,c}$	0.5		
$\Delta N_{Rk,p;0;n;\infty} = \eta_{k,p,fat} \cdot N_{Rk,p}$			

In absence of other national regulations, the following partial safety factor $\gamma_{M,fat}$ for the calculation procedure I and II (Tables from 21 to 24) according to EOTA TR 050, it is recommended that:

$$\gamma_{M,fat} = 1,35 \text{ (Steel)}$$

$$\gamma_{M,fat} = 1,5 \text{ (Concrete)}$$

HAZ METAL – Anchor Channel HMPR
